COLORS & FINISHES RANGE

PLATED

Involves electroplating a metal layer onto a surface using a chemical mixture. Much less resistant to chipping and scratches than a powder-coated finish. Metal plating can be enviromentally harmful and costly due to the use of toxic chemicals, high water and energy consumption, waste generation, and maintenance costs. Alternatives such as powder-coating provide similar benefits with fewer environmental impacts and lower costs.

POWDER-COATED

A process that involves applying a dry powder to a surface, which is then heated until the powder melts and forms a smooth, durable coating. It provides a protective layer that resists corrosion, fading, and chipping.

*Physical Vapor Deposition (PVD)

Physical vapor deposition is a vacuum coating process that has a higher corrosion tolerance than electroplating and other forms of metal finishing. Because of the corrosion resistant properties, PVD coatings provide a brilliant and more durable product.

IMPORTANT

The perception of colors by the human eye varies from one individual to another. Colors and finishes shown above are for illustrative purposes only and should be used solely for general guidance. Actual colors and finishes may vary depending on the shape of the product, its composition, and the brightness of the light to which it is exposed. Slight color or shading variations may also occur between individual units, within acceptable quality control tolerances.

Contact a Radisson Industries representative for an actual sample and stock availability. Plated decorative finishes may be subject to longer lead times, delays, and minimum order quantities due to the complex nature of the plating process.
